Semester Project Proposal
MSCS 630L-711 - Spring 2022

Jarett Sutula

Jarett.Sutula1@Marist.edu

Due on March 20th, 2022.

1 Password Manager App

My project is a password manager app built to save passwords for a user. This app will encrypt sensitive information for a user using AES and decrypt it given a private key selected by and stored offline by the user. It will give them the ability to add, remove, and edit website credentials without having to save them with third-party companies they may not trust. It could be saved offline or used online in a secure database to access their credentials on other devices.
